**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dexter Chang on September 15, 2006.

The application has been amended as follows:

***In The Claims***

16. (Currently Amended) An SDH or SONET transmission apparatus as set forth in claim 1  
~~A frame timing re-clocking method for the SDH or SONET transmission apparatus of claim 1,~~  
wherein

a frame timing of a received signal frame is re-clocked to the intra-apparatus reference frame timing without using pointer processing to establish synchronism.

***Allowable Subject Matter***

2. Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest the main signal processing unit includes a main signal timing re-clocking section for synchronizing frame timings of the main signal frames with the intra-frame reference frame timing using a main signal memory section for temporarily

Art Unit: 2616

storing the main signal frames and each of the interface units includes a main signal signaling processing section for performing signaling a main signal frame to the main signal processing unit based on the intra-apparatus reference frame timing distributed from the frame timing distribution section of the main signal processing unit, as specified in independent claims 1 and 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Eschholz (US Patent No. 6,278,718 B1) discloses distributed network synchronization system.

Wolf (US Patent No. 6,163,551) discloses network element for use in synchronous digital communication system and central clock processor.

Bortolini et al (US Patent No. 6,163,549) discloses synconrizing a central timing unit to an external link via a switching network.
